To find 0 , z , and r .--At the U. S. Naval Observatory all chronometers are subjected to two tests in the temperature room, the variation being from 90 F. to 50 F. in the first; and from 50 F. to 90 F. in the second. The chronometer? are exposed in each test for one week to certain predetermined temperatures under certain fixed rules; the errors being determined at the beginning and end of each week, the daily rates for the several temperatures are obtained from them. The data found at the mean temperatures of 55 , 70 , and 85 F. are used in the general formula for the determination of 0 , z , and r , and from these values, a curve is constructed for each chronometer.
