

Compressional and Shear Wave Velocity Versus Depth in the San Francisco Bay Area, California: Rules for Usgs Bay Area Velocity Model 05.0.0: Usgs Open-File Report 2005-1317 (Paperback)

Filesize: 2.07 MB

Reviews

It is an awesome book that we have possibly go through. It is actually writter in straightforward words and phrases and not confusing. It is extremely difficult to leave it before concluding, once you begin to read the book.

COMPRESSIONAL AND SHEAR WAVE VELOCITY VERSUS DEPTH IN THE SAN FRANCISCO BAY AREA, CALIFORNIA: RULES FOR USGS BAY AREA VELOCITY MODEL 05.0.0: USGS OPEN-FILE REPORT 2005-1317 (PAPERBACK)

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This report summarizes and documents empirical compressional wave velocity (V_p) versus depth relationships for several important rock types in northern California used in constructing the new USGS Bay Area Velocity Model 05.0.0 [// These rock types include the Jurassic and Cretaceous Franciscan Complex (metagraywacke and greenstones), serpentinites, Cretaceous Salinian and Sierra granites and granodiorites, Jurassic and Cretaceous Great Valley Sequence, and older Cenozoic sedimentary rocks (including the La Honda basin). Similar relations for less volumetrically important rocks are also developed for andesites, basalts, gabbros, and Sonoma Volcanics. For each rock type I summarize and plot the data used to develop the velocity versus depth relationships. These plots document the existing constraints on the proposed relationships. This report also presents a new empirical V_p versus depth relation derived from hundreds of measurements in USGS 30-m vertical seismic profiles (VSPs) for Holocene and Plio-Quaternary deposits in the San Francisco Bay area. For the upper 40 m (0.04 km) these mainly Holocene deposits, can be approximated by V_p (km/s) = $0.7 + 42.968z - 575.8z^2 + 2931.6z^3 - 3977.6z^4$, where z is depth in km. In addition, this report provides tables summarizing these VSP observations for the various types of Holocene and Plio-Quaternary deposits. In USGS Bay Area Velocity Model 05.0.0 these compressional wave velocity (V_p) versus depth relationships are converted to shear wave velocity (V_s) versus depth relationships using recently proposed empirical V_s versus V_p relations. Density is calculated from V_p using Gardner's rule and relations for crystalline rocks proposed by Christensen and Mooney (1995). V_s is then used to calculate intrinsic attenuation coefficients for shear and compressional waves, Q_s and Q_p , respectively.
